- The above evaluation and weightage criterion is common for all the participating units. In such a case, Award Committee reserves the right to modify the criteria, which shall be uniformly applied to all the participating units.
- The units having negative specific energy consumption reduction shall not be considered for the award.
- For all the evaluation criteria, if the difference between the first and second unit in the particular criteria is more than 10% in the percentage score, then the second best unit will be awarded 10% less marks than that of the first unit and prorate will start from that building onward. Similarly, if the difference between second and third building is also found to be more than 10% the above methodology will be followed till the completion of the evaluation criteria of all the units.
- In case of category 1 and category 2, if it is found that for a particular unit in a particular category, the % SEC reduction, GHR improvement / Auxiliary Consumption reduction (Thermal Power Plants) is exceptionally high mainly due to increased capacity utilization or changes in the manufactured product combination and is affecting the weight age of other units, Award Judging Committee reserves the right to modify the Evaluation & Weight age criteria for that category.
- The Weightage criteria for the two years 2018-19 and 2019-20 would be in the ratio of 50:50.
